Show all work needed to reach your answers.

Consider the continued root

 $\sqrt{5} + \sqrt{5} + \sqrt{5} + \sqrt{5} + \sqrt{5}$ 

Median : low:

Solutions

1. (2 points) Which sequence is equivalent to this continued root?

{15, 15+15, 15+15, ... }

- 2. (3 points) Call this sequence  $\{a_n\} = \{a_1, a_2, a_3, ...\}$  (just to give it and its terms a name). Please write Might be acceptable. down the recurrence formula giving  $a_{n+1}$  in terms of  $a_n$ .  $a_{n+1} = \sqrt{5+a_n}$
- 3. (12 points) This sequence can be shown to be increasing, so to guarantee convergence, please use the

recurrence formula to show the sequence is bounded above. Hint: Induction. Let P(n) be the statement " $a_n \leq 4$ "  $\textcircled{}^{n}$  [ Could be used. Step 1: P(1) is True: 01= 15 < 19 = 3 < 4. Step 2 (Inductive Step): Suppose  $a_n \leq 4$ . Then by the recurrence formula,  $a_{n+1} = \sqrt{5+a_n} \leq \sqrt{5+4} = 3 < 4$ . Thus These last P(n) = P(n+1). (+4) details could Hence by induction,  $a_n$  is bounded above  $\forall n$ .

4. (8 points) Please compute the value of this continued root (the limit of the sequence).

Since the sequence converges,  $a_n \rightarrow L$  and  $a_{n+1} \rightarrow L^2$ so  $L \stackrel{(+2)}{=} \sqrt{5+L} \rightarrow L^2 - L - 5 = 0 \iff L = \frac{\pm \sqrt{1+20}}{2}$ Since L > 0,  $L = \frac{1}{2} + \frac{1}{2} \sim 2.8$
